(57) Abstract :

In this vastly expanding world with thousands of opportunities, it can be extremely difficult for students to decide and pursue what they truly enjoy and are passionate about. With the rise of new technologies, the most pressing question for students today is what to learn and how to learn. Students find it difficult to learn even though there are numerous options and that everything is so diverse. Nothing can ever be found on a single platform. The present invention intended to solve this issue. Inventors provide a platform that will give students an idea about the languages that are currently the most sought after in the industry, as well as a road map and resources from various platforms that will allow students to hone their grasp on the fundamental concepts and the entire language. The details are shown in figures of the present enclosure.
